

Time: 5/3/2024 – 12/3/2024

We have continued with the websites, facing, and then fixing some errors along the way.

We also showed our progress to Dr Yun Fu, comparing the requirements list with what has actually been done.

We are now done with the video generation which works as follows: it gets an mp3 file with the speech, generates an image using StabilityAI or randomly selecting of pre-made MidJourney images and finally combines the two together.

The user suggestions feature is now done too, allowing users to generate an episode by entering the topic, keywords, and description.

The plan for the next week is to:

- Continue building the website report.
- Fix some errors in code.
